Superstore Sales — Executive Report

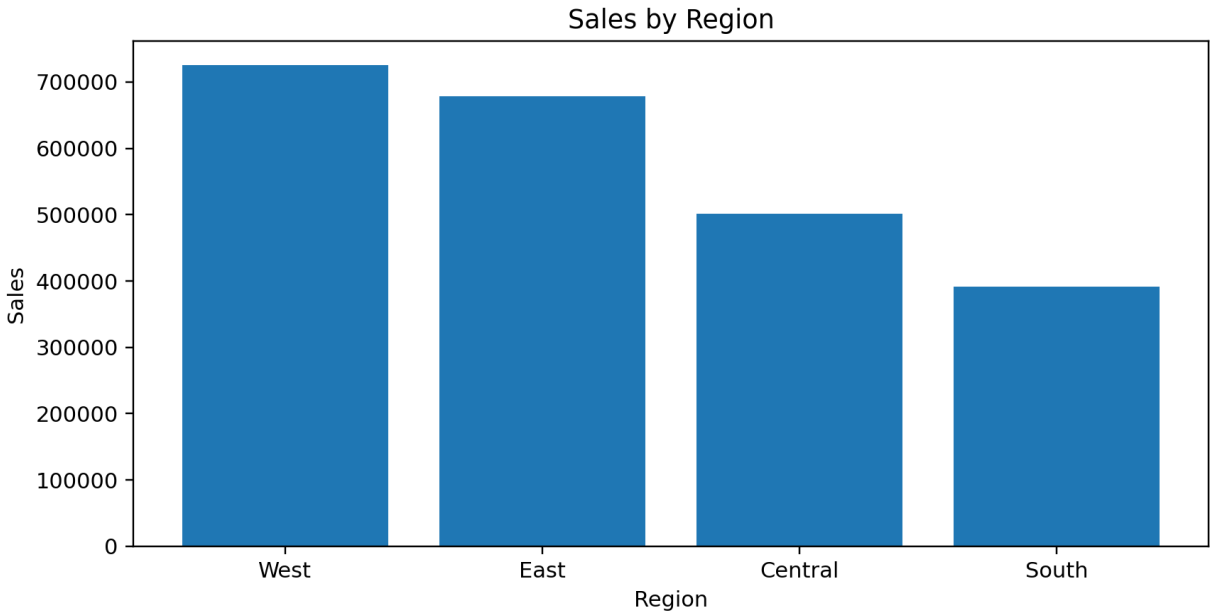

Prepared from the uploaded CSV. This is an analytical report and Power BI build guide; it is not a .pbix file.

Metric	Value
Total Sales	$2,297,200.86
Total Profit	$286,397.02
Distinct Orders	5,015
Profit Margin	12.47%
Rows after duplicate removal	10,296
Order date range	2015-01-03 to 2018-12-30

Monthly sales trend

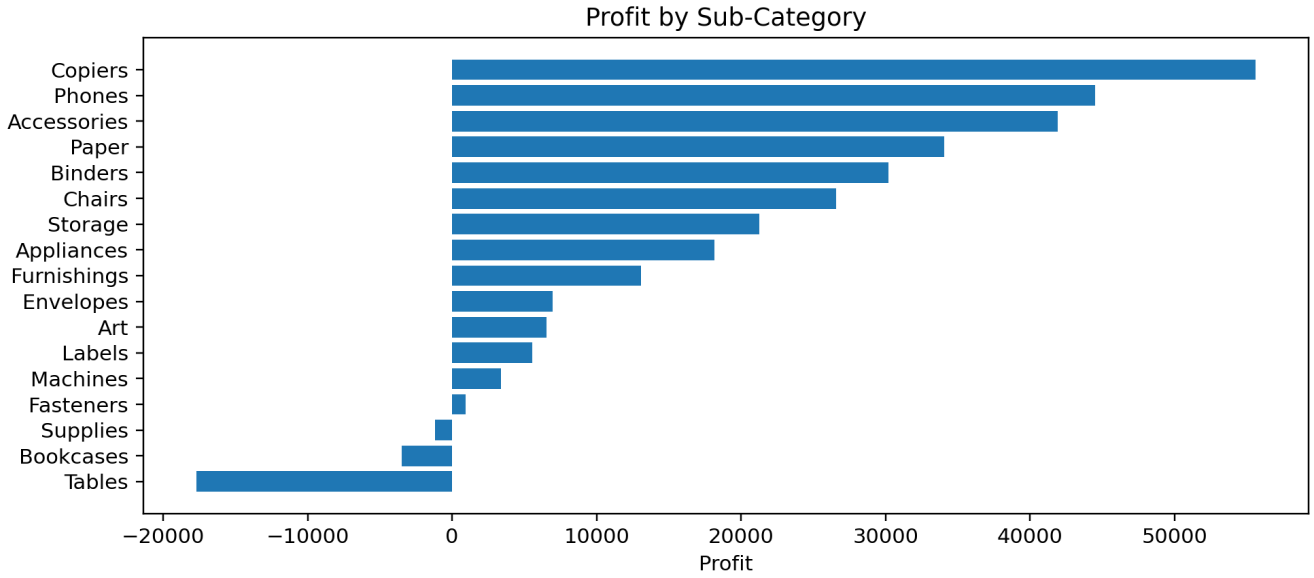

Regional performance

Regional summary

Region	Sales	Profit	Margin
West	$725,458	$108,418	14.9%
East	$678,781	$91,523	13.5%
Central	$501,240	$39,706	7.9%
South	$391,722	$46,749	11.9%

Product profitability

Initial executive takeaways

• Overall profit margin is 12.5%; monitor margin alongside sales to avoid growth that is not profitable.

• The West region has the highest total sales in this dataset.

• The West region has the highest total profit in this dataset.

• Use the monthly trend to identify seasonal peaks and compare like-for-like months across years.

• Use the product profitability matrix to investigate sub-categories with negative profit before increasing discounting or promotion.

• Discount sensitivity should be evaluated with profit and margin—not sales alone—and ideally compared within category/sub-category.

Build notes

Use the accompanying Excel workbook for the cleaned data and star-schema tables, and the DAX guide for relationships, measures, sorting, and suggested visuals. Import the tables into Power BI Desktop, validate relationships, then export the finished report to PDF from Power BI. This generated PDF is a supporting report, not a Power BI-native export.
